ABOUT US

PT. JAYA HAMPARAN ALAM (PT. JHA) was established in Jakarta in 2017 as a distribution company focused on selling granite tile products under the DECOGRESS brand.

The company is a subsidiary of PT. ASRI PANCAWARNA, which has long been involved in the production of building material products and has a sales network throughout Indonesia.

DECOGRESS was produced by PT. ASRI PANCAWARNA in mid-2005 and is dedicated as a porcelain tile to meet both domestic and international markets. The company is led by senior management personnel who are experienced in the ceramic tile industry.

DECOGRESS is produced using only the latest technology imported from various leading machinery and equipment suppliers from Europe, and continually employs advanced technology that is constantly updated and refined.

VISION

To become the best granite tile distributor in Indonesia in terms of profitability growth and customer satisfaction, thus being prepared to face regional and global competition.

MISSION

Enhance competent human resources by creating a good work environment to achieve customer satisfaction.

Increase the awareness and responsibility of all employees' performance to enhance the company's profitability and improve the welfare of all employees.

Become a strong and growing company by maintaining consistent quality, thus being prepared to face regional and global competition.

AWARDS

RANDOM LAYOUT

Randomly designed tiles present a unique and dramatic design statement into space. The cutting edge digital technology brings together a variety of design and colors in a single design. Randomly designed tiles or multi-faceted tiles offer unique characteristics of natural material that blend with tile resilience. Our random tile design makes it easy to integrate natural imperfections into ambience concepts.

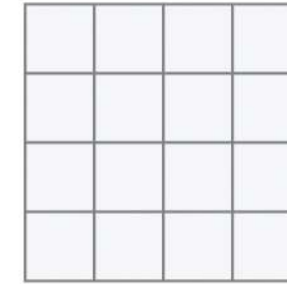

SHADE VARIATION

In the production process, there is no shade variation. Produced by raw natural raw material and due to combustion, tiles naturally come with color and size variations in the same batch and over batch to batch. Therefore manufacturers limit the amount of shade variation in the carton box by sorting the tiles coming from the production line.

QUICK TIPS

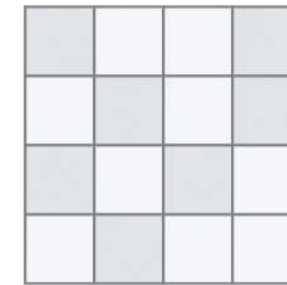

- View tiles as a carpet of tiles and not as individual pieces.
- Before installation, it's recommended to check the desired effect with a dry lay first.
- It's also ideal to view the dry lay effect under lighting condition which is as close as possible to the final lighting condition.
- When using one type of tile within the same area, it's recommended to use tile from within the same production batch.

V1

UNIFORM FROM TILE TO TILE

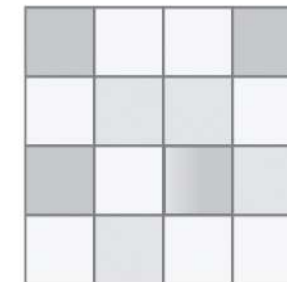

Tiles have a harmonious shade and texture with low minimal variation

V2

SLIGHTLY NOTICEABLE FROM TILE TO TILE

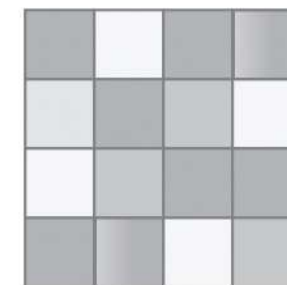

Tiles have a slight variation in shade and texture

V3

MODERATELY NOTICEABLE FROM TILE TO TILE

Tiles have a moderate variation in shade and texture

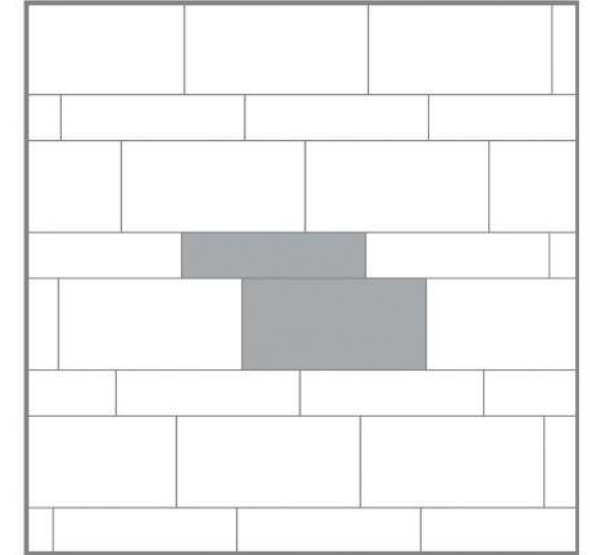

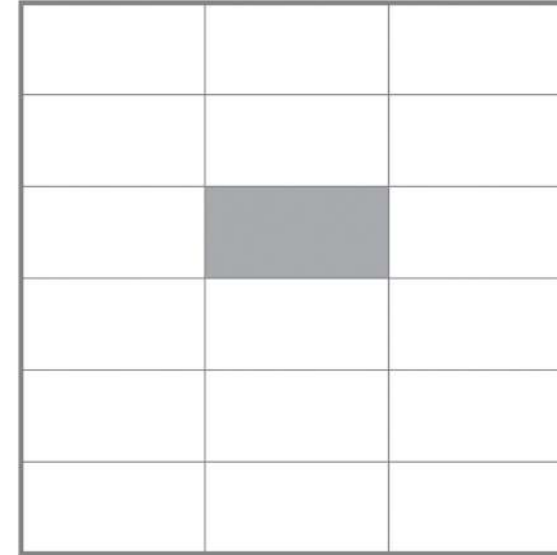

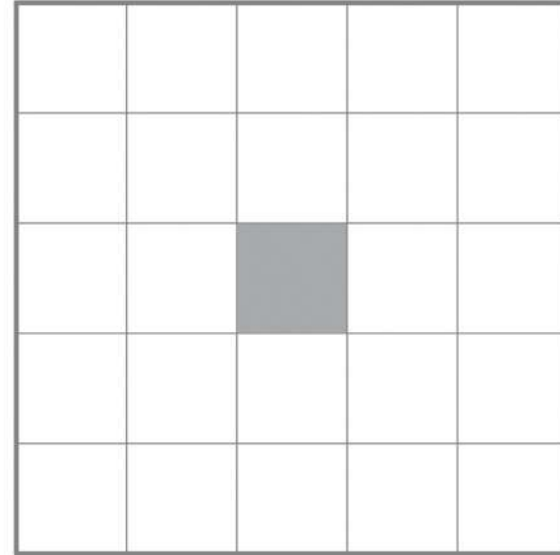

V4

DISTINCTLY NOTICEABLE FROM TILE TO TILE

Tiles have a random or substantial variation in shade and texture, and each pile of tile may be in shade to one another

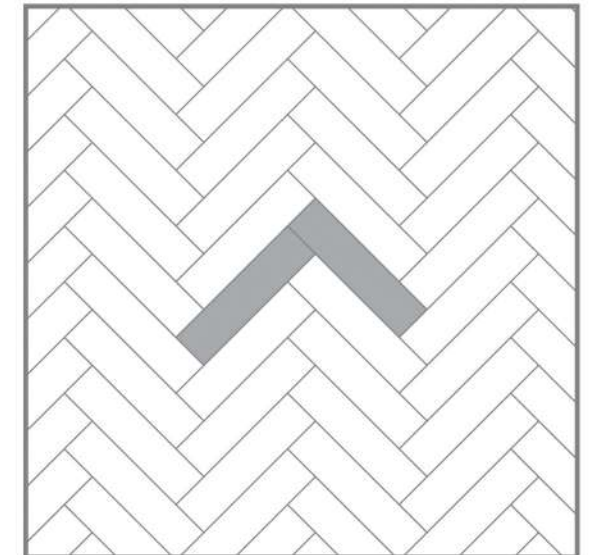

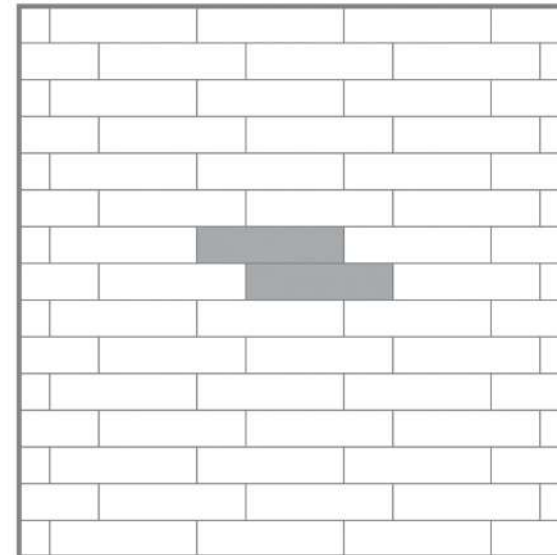

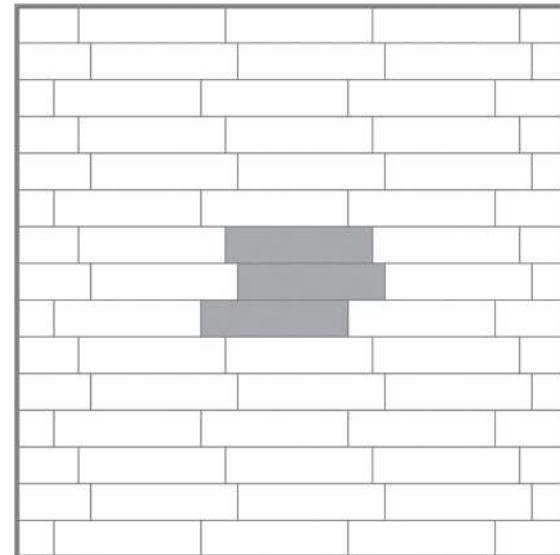

TILE LAYOUT

Layout can add value and beauty to your house. Proper tile layout will give you the chance to complete the task fast, in a hassle-free way. Different tile layouts can be integrated to create different interior concepts. While on the drawing board any tile layout may work well, given that each circumstances is unique, before installation, it is recommended to check the desired effect with a dry lay first.

QUICK TIPS

- Check for straightness of floors and walls.
- Check whether any special treatment is needed for the area to be tiled, such as waterproofing, special bedding, or leveling.
- Particular attention should be paid to tile sub sizes, tile shades and thickness of varying tile sizes, as these would need to be synchronised for a desired final effect.
- Determine the grout joint width and type of grout needed. The recommended tile gap is a minimum of 3 mm for floor tiles and 1,5 mm to 2 m for wall tiles.
- There are different types of adhesives for different installation conditions. It's recommended to check with professional as well as the manufacturer's instruction to ensure that the right type of adhesive and grout is chosen for application.

WOOD TILE APPLICATION RECOMMENDATION

Open the box and arrange the tiles to get preferred random effect before install.

Clean the surface before install randomly with maximum $1/3$ tile length to get best natural result.

Install with 3 - 4 mm spacer between each tile for grouting and minimize problems.

Protect install tiles with adhesive minimum for 5 hours or until perfectly dry.
